

Tips for using the **MX101 Deluxe Screen Protector Installation and Care Kit**

This Kit Includes:

- 1 oz. Staticide anti-static spray
- 1 oz. screen cleaner solution
- 14" x 14" silky microfiber screen cloth
- 16" x 12" suede cloth for general cleaning
- A Pair of latex-free rubber gloves
- Dust removal tacky tape
- Squeegee

If installing a screen protector, please read "Film Installation Instructions" prior to installation.

Guidelines to properly CLEAN your screen

When cleaning your monitor, be sure to gently wipe without overworking or applying excessive pressure to avoid damaging the surface coatings.

Before you start:

- Ensure your cloths are clean and free of grit
- If possible, vacuum the screen and area with a soft, clean dusting brush.
- Allow your display to cool

Prevent dust issues:

- Use the suede cloth to gently dust the screen
- To eliminate static, spray Staticide on the suede cloth, and wipe both sides of the screen protector before installation. Also spray and wipe the table top surface. Lightly spray any carpeting around the install area. Do NOT use directly on your screen.
- Clean the remaining area as best as possible

Cleaning your screen:

- Spray a liberal amount of the screen cleaning solution onto a portion of the packaged silky cloth
- Wipe the screen to evenly distribute the solution on the screen
- Rotate the cloth to a dry portion, wiping the screen until it is dry. You may need to rotate the cloth a second time.
- Clean the edges and corners of the screen by either wiping with a cloth, using a clean soft brush, or using a vacuum with a clean soft brush attachment.

Gloves, Squeegee, Tacky tape:

- Use the gloves during the film installation
- Use the squeegee and tacky tape per the film installation instructions

Microfiber Cloth Care Instructions

One of the advantages of using microfiber cloths is that they can be washed and reused over and over instead of using expensive, non ecofriendly paper products.

After use, check the cloth to see if it needs to be washed. If not, allow the cloth to air-dry, then store in a clean, dry place.

For non-critical cleaning: Machine wash or wash by hand. Avoid washing with linty or oily items. Use warm water, adding a very small amount of detergent. Avoid using any bleach or fabric softeners. Dry on low heat or air-dry.

For critical cleaning: Use the instructions above, but wash the cloths separately, either by hand or by machine, and rinse at least one extra time.

To Sanitize: clean cloth in light, soapy water; rinse. Place in microwave for 15-30 seconds (depending on cloth size and microwave power), then remove to air dry.
